

I have been avid listner to satelite radio. There is no reason to to limit this service. Every industry goes through change, this is an example of this. Because the National Broadcaster Association(NAB) does not want to change there format to compete they are lobbying you to make a law. The music industry has gone through the same change with downloading of music. Please don't change the way the rules are. Let commerce run its course. Less government.Tom Kubo
